

E-SERVICES TRANSLATION PORTAL SYSTEMABSTRACT

5 A portal for translating data is provided wherein
users upload text to be translated. The text may be in the
form of Web pages, in the form of hypertext mark-up
language (HTML) files, or other formats. The portal at
least partially translates the data and facilitates the
selection of a vendor or vendors to complete the
translation process. The portal makes use of a database
containing previously completed translations, which
database is utilized to at least partially translate new
requests for translations, and thereby reduces the workload
of the vendors selected to complete the process.
